INFORMATION STORAGE

For so long now we have been keeping track of information using pen and paper. With the emergence of the information age, we are able to collect information and store it electronically for managing it more effectively and efficiently. This electronic data can be recalled using various indexes, analysed and transported in a structured format. These new methods allow us to keep track of far more information and reduce the complexity of managing the information required to keep the business operating effectively.

DEVELOPMENT

IMBox™ is expanding and diversifying how we currently collect, view and use text, audio and visual data, as a form of transportable and reusable information. These tools have the capacity to modernise the way we capture information and the way we store it in a structured, systematic manner for an efficient and effective recall, allowing users to keep control of their own library of text, pictures, sounds and motions.

Online Database Solutions
for your business needs

IMBOX PROVIDES THE ABILITY TO SHARE
DATA WITH OTHER USERS ONLINE

LIVE WEBCAST

Take an important event and capture its progress. IMBOX will encode the videocam signal and make it available via IP data networks. Within seconds the event can be transmitted anywhere in the world via the Internet.

RECORDING

IMBOX will encode the video signal and store it on a hard drive, USB memory or Disc CD/dvd. Reopen the file any time or transport it to other players and viewers.

DISTRIBUTION

IMBOX encodes in such way so that the memory consumption is lower than most other standards available today. Practically, a small presentation can be emailed as attachment without overloading the system.

SUPPORT SOLUTIONS

- Job Tracking and dispatching
- Training and Events tracking
- Inventory systems
- Cashflow journals
- Customers database
- Data integration with other apps
- General information keeping
- Data analysis and reporting
- Data warehousing
- List management

In today's business environment, the ability to efficiently and effectively maintain and communicate information is critical. Timelines, budgets and resources are tighter than ever before. As a result, companies are looking for ways to improve their communications with:

- Employees based across borders and time zones
- Partners and vendors who provide critical business functions
- Customers interested in buying products and services
- Delivering reliable information

The availability of high-speed network access and more mature technologies have given rise to increased adoption of digital solutions to solve business problems. A growing number of enterprises use digital media for tasks such as:

- Data warehousing
- Data Structures
- Schema and design
- Daily reports presentations
- Interfaces
- Automatic calculations
- Process Automation
- Information storage
- Data Security
- Data analysis
- User Interfaces

By incorporating IMBOX database solutions into your services, we can:
- Significantly improve your ability to respond and profit from the growing demand for information management solutions in the market
- Use your experience with computers to incorporate staff members, suppliers and clients into the operational functions of your business sharing reliable and up to date information.
- Show your customers immediate value by reducing the operational costs of tracking information and training, whilst increasing the effectiveness and availability of these media-based assets
